(54) Title: **E-BOOKMARK**

(57) Abstract: The present invention provides a method for creating an electronic bookmark during browsing on a web. According to a predetermined sequence the method records the process of browsing the specific program content by an user and stores the process in a storing means. The stored content is a browsing command for requiring a specific server to send the program content from a random position in a specific program specified by an user. When a user clicks the bookmark, a series of requests contained in the bookmark are handled one by one in the batch-handling manner, so that the user can directly and accurately find the specific position in the specific program in a on-line manner in the web, as conveniently as using conventional bookmarks in the conventional books.
